AUTOMATIC BLADE STOP KIT

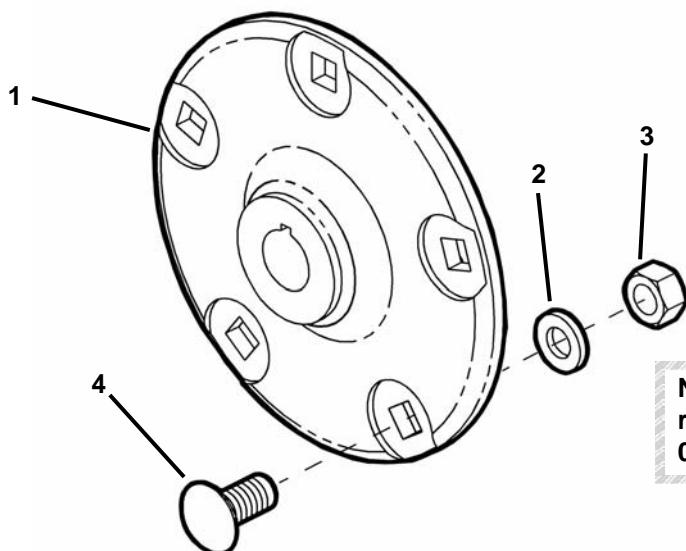

AUTOMATIC BLADE STOP KIT

Installation of this kit will update Snapper rear engine Riding Mowers to include the Automatic Blade Stop (ABS) feature introduced as standard equipment for the '83 model year. The kit applies directly to all HI-VAC (25, 28 & 33) models and to standard 23 and 30" models built after 1974. Consult the Snapper Customer Service Department for application on models built before 1974. With ABS properly installed and adjusted, the cutter blade will stop in less than three seconds after release of the blade pedals. Refer to the Snapper #1-4018 Operator's Manual provided in the kit for operating instructions after installing the kit.

ACCESSORIES, TOOLS

Part Number 3-2392, SMOOTH CLUTCH TOOL. See page 80, item 23.

Note: In order to remove or install a smooth clutch friction ring (See Page 80, item 3) it is necessary to prevent the smooth clutch assembly (See page 80, item 1) from rotating while the driven disc retaining nut is being turned. Holding the assembly with vice grip pliers is not recommended as this can cause warpage of the disc and a consequent roaring vibration. Instead, use the smooth clutch tool (3-2392) as shown in the picture at right.

ALUMINUM DRIVE DISC PULLER KIT (SNAPPER #6-0325)

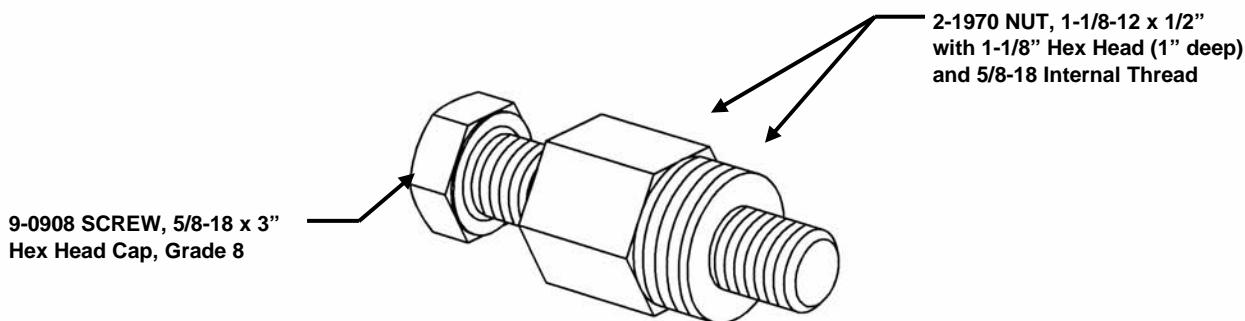

REMOVING THE ALUMINUM DRIVE DISC:

- Step 1: Stand Rear Engine Rider on bumper. Clean threads in center hole.
- Step 2: Rotate disc until set screws are straight up.
- Step 3: Use a 3/16" allen wrench to remove the set screws from the hub.
- Step 4: Squirt some penetrating oil into set screw holes and into the large disc hole.
- Step 5: Back the set screw out until the end is flush with the end of the T-nut threads.
- Step 6: Screw the T-nut into the center hole threads of the aluminum disc and snug by lightly tapping the end of the "T" in the tightening direction.
- Step 7: Tighten puller set screw against bottom of crankshaft to pull disc off.

ACCESSORIES, TOOLS (continued)

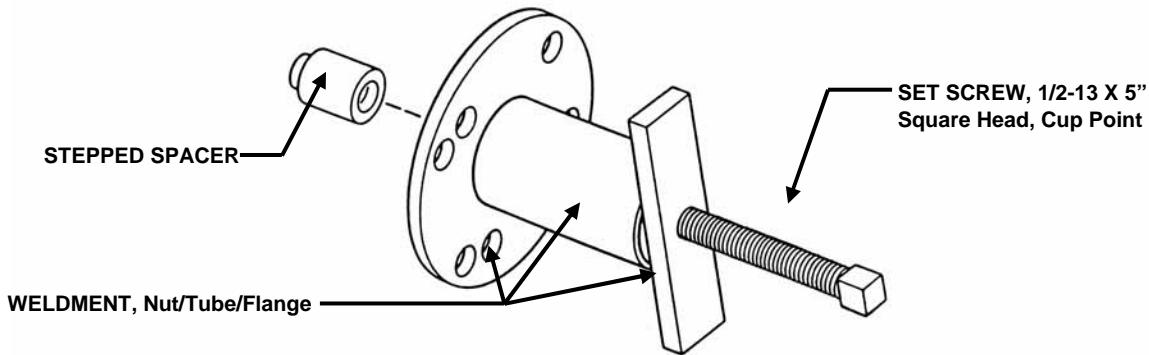

STEEL DRIVE DISC PULLER KIT (SNAPPER #6-0747)

REMOVING THE STEEL DRIVE DISC:

- Step 1: Stand Rear Engine Rider on bumper. Clean threads in center hole.
- Step 2: Rotate disc until set screws are straight up.
- Step 3: Use a 3/16" allen wrench to remove the set screws from the hub.
- Step 4: Squirt some penetrating oil into set screw holes and into the large disc hole.
- Step 5: Back 9-0908 screw out until the end is flush with the end of 2-1970's threads. Screw 2-1970 nut threads into the drive disc center hole and lightly snug with a 1-1/8" wrench. Hold wrench on nut while tightening the bolt with a 15/16" socket.
NOTE 1: Impact wrench may be used.
NOTE 2: Steel drive discs held to crankshaft with a 7/16" bolt can be pulled off by removing this bolt and installing a 1/2-20 bolt into the drive disc threaded hole. As the 1/2" bolt is tightened it will pull the disc off the shaft.

WHEEL HUB PULLER KIT (SNAPPER #6-0327)

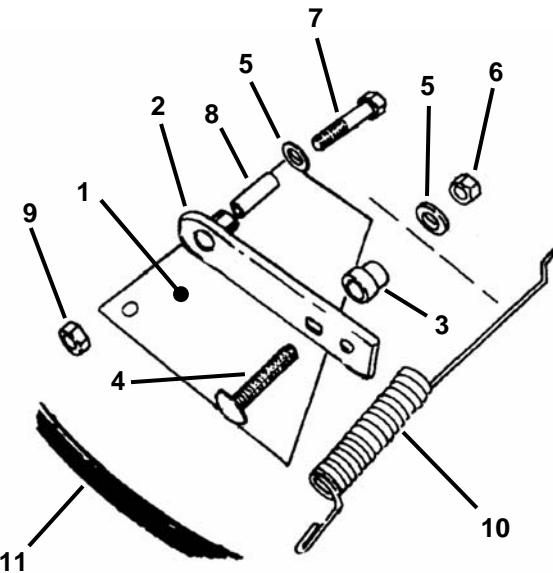

REMOVING WHEEL HUBS (both 3-hole and 4-hole):

- Step 1: Stand Rear Engine Rider on bumper or jack it up and remove tire/wheel assembly.
 - Step 2: Remove tapered axle bolt and squirt penetrating oil in the hole and at each end of hub to axle.
 - Step 3: Tap hub lightly to help penetrating oil work its way in. With triangle 3-hole hub; hit edge of triangle and try to rotate the hub on the axle to misalign the axle bolt holes.
 - Step 4: Tap axle bolt holes with hammer (Tapered bolts cause flared hole edges, rotating hub and tapping the holes flattens the flare easing removal).
 - Step 5: Back the set screw out until the end is flush with the end of the "T".
 - Step 6: Install puller onto hub, align matching hub holes, then install "all" 3 or 4 lug bolts snugly (leaving one out or not snugging increases hub flange bending). Note also that on the tubular axle you should insert the stepped spacer into the tubing for the bolt to push against before installing puller onto hub.
 - Step 7: Hold "T" while tightening puller bolt. Alternate tightening bolt, tapping hub and applying penetrating oil as necessary.
- NOTE: Sometimes the hub cannot be pulled and may be destroyed; at that point, saw the axle off and replace both hub and axle!
