

# Manual

## ***Echo Transportation Box ETB-120***

## Use for intended purpose

The ECHO Transportation Box ETB-120 is designed for mounting on all C-Series tractors.

Any transport of people or animals is not allowed!

With the ETB-120, loads can be transported up to 120 kg.

Misuse, especially the slide of loose materials or similar is strictly prohibited.

## Warranty

Echo Motorgeräte grants a warranty of 2 years for private usage, in commercial use by 1 year.

Use the strut when you go with loaded carrier!

This greatly relieves the suspension of the box as well as the rear shot of the tractor.

A go without mounted strut can cause severe damage and is excluded from the warranty.

Mounted strut

# Mounting

Check the completeness of the delivery using the enclosed packing list.

Place the base plate on a flat surface, first mount the two reinforcing plates. To do this, use the lens head screws M8. Allow all connections still loose!

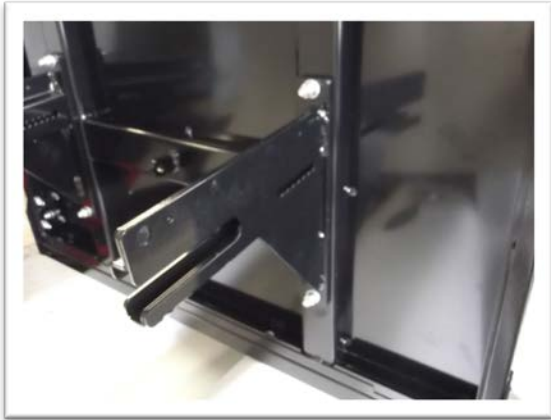

Now place the back wall on the base plate and fasten it with this and the stiffening plates.

The side panels are mounted with the screws M8x20 washer and nut M8. Let these glands also still loose!

The tailgate is bolted to the base plate with two screws.

The two arms must be assembled as shown.

To do this, use the shims.

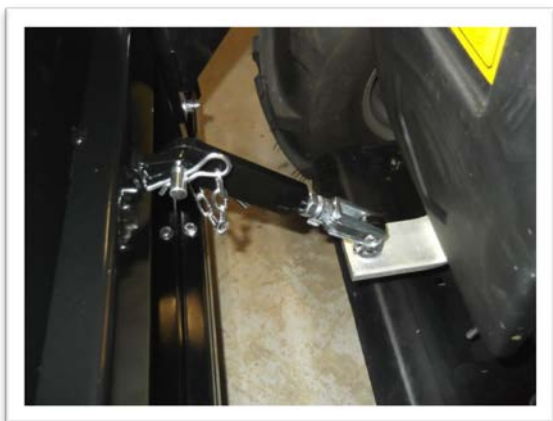

The locking levers are screwed from the inside of the arms. Mount also the two spacer sleeves to allow the freedom of movement of the arms are maintained.

The holder to hold of the strut is screwed on the slope coupling of the tractor.

For mounting the carrier on the two arms of the PGC Lift on the tractor is inserted and secured with the locking levers.

The strut is mounted as pictured and prevents overloading of the rear intake.  
Use them every time you drive with loaded ETB 120!

The transportation box can be lowered at ground level for easy loading and unloading.
